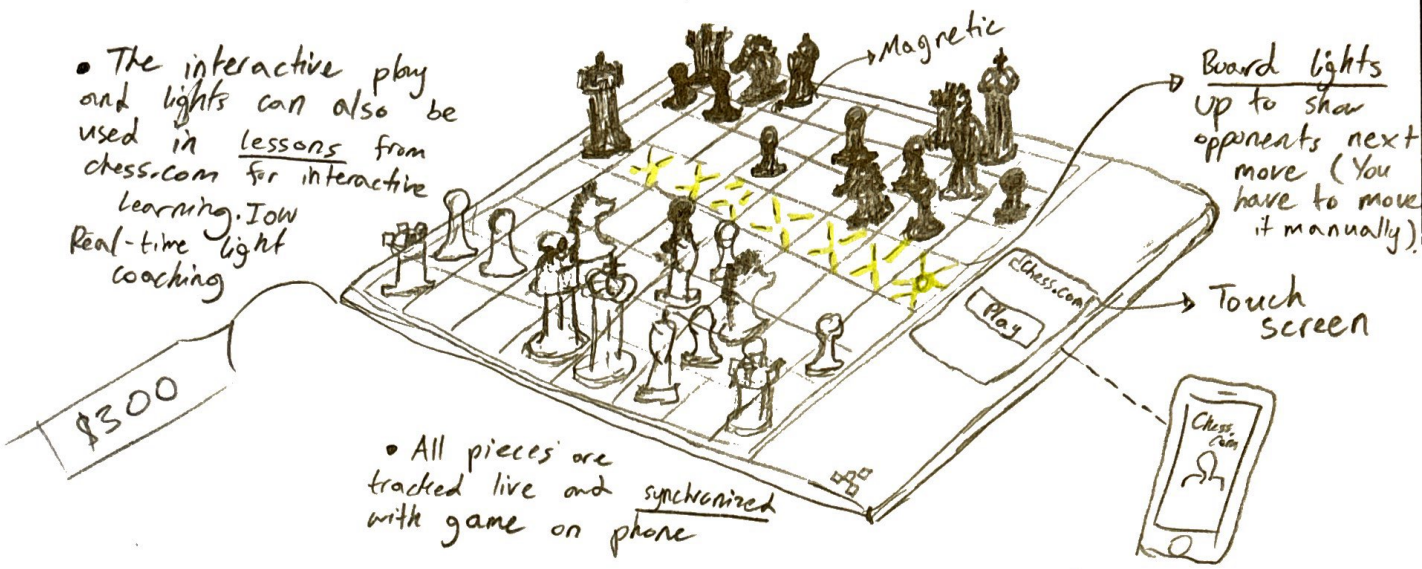
ChessUp



Competitors:

1. Chessnut: Advanced robotic chessboard with self-moving pieces (like Harry Potter). Priced at $800. Natively supports chess lessons and synchronizes with its own app (not chess.com for online play)
2. GoChess Wizard: Real-time light coaching. Doesn't connect to chess.com instead connects to its own app. Pieces and app are Harry Potter themed. Priced at $380
   (I wasn't looking for that aesthetic)

Why ChessUp over Chessnut:

My basic want and goal out of this product is to practice and learn to play chess effectively; therefore I chose ChessUp over Chessnut because...

1. It connects to Chess.com which I already use and has my progress saved on lessons, and I can use the board to play online. (It is the first and only chessboard that connects with Chess.com
2. While robotic self-moving pieces sound and looks cool, it is not perfect according to reviews, which can mess up play. Therefore, the light guidance seemed more reliable even though it is simpler.
3. The price made a difference; Chessnut felt overpriced at $800 compared to $300 for ChessUp
